

~~Q1~~ (2) $\int \left(e^{-3x} - \frac{e^{2x}}{4-e^{2x}} \right) dx$

Soln. $I = \int e^{-3x} dx - \int \frac{e^{2x}}{4-e^{2x}} dx.$

Let $u = -3x.$

$$\frac{du}{-3} = dx.$$

Let $v = 4 - e^{2x}$

$$\frac{dv}{dx} = -2e^{2x}$$

$$\Rightarrow \frac{dv}{-2e^{2x}} = dx.$$

Thus, $I = \int \frac{e^u du}{-3} - \int \frac{e^{2x}}{v} \frac{dv}{(-2e^{2x})}$

$$= -\frac{1}{3} \int e^u du + \frac{1}{2} \int \frac{dv}{v}.$$

$$= -\frac{1}{3} e^u + \frac{1}{2} \ln(|v|) + C$$

$$= -\frac{1}{3} e^{-3x} + \frac{1}{2} \ln(|4 - e^{2x}|) + C.$$
